Meeting Minutes-Group 1
2022-4-4

Attendees: Taimur Tawil, Jennie Q. Colabella, Asfand Alavi, Nick Finelli, Antonio Finelli, Jorge Cruz, Professor Denizard

Discussion:

Timeline until final:
- Presentations probably the week of 5/2
- We need the last week of April to put the finishing touches on the presentation.
- Coding completion target probably end of third week of April

Updates

Asfand and Jorge: Have been researching authorize.net/API for credit card purchases. It's 50% done. The card can be input and generate a bill. The client needs a form for a one time setup (their credential, etc.). RepairShopr has info. for how to set it up. Cube Cart will have information that might be helpful too. Do NOT store credit card info. in the database.

Nick: Error handling is an ongoing task, Shopping cart issue is being dealt with.

Antonio: Delete "is_discontinued" has been updated. ADA compliance: Antonio is implementing ADA functionality to the inventory. Will continue to work on this while managing Github and taking over sessions work with Nick.

Tai: Event order update. It's still in progress. He asked if the event order should have a range of guests or be for a specific amount of people. Professor Denizard explained how base prices work. The amount of people matter for events with food. We should have it set up so the client can pick tiers. If they book for 100 people and 103 show up, they get billed for the next tier.

Jennie: Verifying what's needed for Z-report, verifying items needed for final presentation.

History section could be an about type page. We can put our sources on it.
