Meeting Minutes-Group 1
2022-3-10

Attendees: Christopher Moschetti, Jorge Cruz, Nick Finelli, Taimur Tawil, Antonio Finelli, Asfand Alavi, Jennie Q. Colabella

Discussion:

Midterm Presentation Discussion/Program Status updates:
- Jennie: Received individual video segments from everyone. The latest one arrived a couple of hours ago. The audio was corrected (boosted in some places and reduced in others), and the extraneous video frames were clipped. The segments have been combined into one file which was converted to an mp4, but the 30 minute file is too large (500mb) to upload to Github. I uploaded it to BB and created a shared file on our Google Drive.

- Chris, Antonio, Nick: On Monday Chris asked that everyone make a separate test branch to submit their midterm work so no files would be overwritten. He wanted to sort through each branch and combine them, but there were technical issues. Antonio and Nick helped resolve them.

- Asfand and Jorge: On Monday Asfand offered to help Jorge find a solution to the problem he was having with his shopping cart. They were able to get it figured out.

- Tai: Offered last week to get the framework for the calendar system in place. He was able to create a nice looking calendar that will allow the client to add an delete events.

- Documentation: We reviewed what documentation is necessary for the midterm presentation – flowcharts, use case diagram, class diagram – and checked to make sure everyone had uploaded the files they wanted to send to Github.
  - Github had technical issues this afternoon. Several of us had problems uploading files and getting them to the folders we wanted them in.
  - Antonio made sure Professor Denizard was added to our current version of Github

- People plan to work on the project over spring break.
  - Tai offered to start working on the event order and will attach his calendar to it.
  - Chris is also working on the event order/employee scheduling
  - Antonio and Nick will be working on the inventory to get it repaired so it's working in the main branch like it was before the latest push. They're also going to clean up the Github files.
  - Jennie is repairing the database tables that are corrupted.
  - Jorge is going to finalize the shopping cart system to get it ready to hook up to the main build.

- Asfand is working on the print function for the invoice and will be looking into the z-report requirements.
