Meeting Minutes-Group 1
2022-3-28

Attendees: Taimur Tawil, Jennie Q. Colabella, Asfand Alavi, Nick Finelli, Antonio Finelli, Jorge Cruz

Discussion:

Timeline until final:
- Presentations probably the week of 5/2
- We need the last week of April to put the finishing touches on the presentation.
- Coding completion target probably end of third week of April

Updates
Antonio: Comment from Professor Denizard: Verify that when a product is_discontinued, the item is hidden, NOT deleted from the system. On inventory page there should be add, edit, and delete buttons.
- When the delete button is clicked, you have to go to check to make sure it's not connected to any invoices. If the item has been used, it CAN'T be deleted. It HAS to be hidden.
- The edit button should allow the user to edit misspelled words and prices.
- Do we have forms for adding clients, vendors, and employees? The same holds true for them: There's an is_inactive field for them. Before deleting a check has to be run to verify that the item was never used. If it was, the client, vendor, or employee has to be hidden, NOT deleted.
    - For Client input form: PD suggests making the 1st question, "Is client an employee?" If yes, go to drop down list of employees and click on the employee. That will populate the client table for that person. If they say no, it goes to the client form and it's still empty and can be filled in.

Jorge: Status of getting the cart situated on the homepage. Has the RightSidePanel been added or do you need help? His issue is putting the cart on the right hand side of the inventory page. He'll show Nick what the challenges are and Nick will problem solve to try to find out why. The same item keeps getting added to the cart everytime Jorge hits submit.

Asfand and Jorge: authorize.net/API for credit card purchases update. Can we use xml and json? Authorize.net has regulatory compliance attached. We don't store the credit card info. in the database but run test cases to make sure it works. Authorize.net has a sandbox to practice in.

Nick:Error handling integration update. The code will be pushed to Github soon.

Antonio: ADA compliance update (with Antonio)

Tai: Event order update

Jennie: We added a mailing list and a user feedback table to the database that are going to need forms and logic. If anyone is interested in tackling those when their current task(s) end, please mark it on the Gantt chart and let me know.
